

# Zoner Photo Studio X Fall Update: Introducing AI for Faster Photo Editing

September 17, 2024—The popular software for editing and managing photos, Zoner Photo Studio X, has received a fresh batch of updates, including innovative AI features, extensive output quality improvements, and a brand-new system of keyboard shortcuts. The update also includes support for Loupedeck+ and other editing consoles.

## Select the Best Photos with AI Previews

ZPS X uses AI to detect faces and offers detailed close-ups of all faces in the image. Selecting the best photo where no one blinked and faces are pin-sharp is now faster than ever.

## AI Presets Enhance Portraits Instantly

In the Develop module, AI can recognize faces, eyes, and mouths and then suggest enhancements using radial filters. This results in subtle brightening of faces and enhanced details for a natural look. Photographers have full control over the intensity of these adjustments at all times.

## Effortlessly Remove Backgrounds

For photographers who need to unify or clean up backgrounds, Zoner Photo Studio X introduces the new automatic Remove Background feature. This feature is especially useful for online store owners or online resellers.

## More Accurate AI-Powered Automatic Adjustments

The popular one-click photo enhancement function now uses AI to recognize the type of subject and tailors the adjustments accordingly. The result is better photos of landscapes, portraits, and other subjects.

## Autostack Similar Photos

Autostacking recognizes similar photos, HDR photos, panoramas, and burst sequences. ZPS X then groups similar photos, making organization and subsequent editing easier. This feature shines when processing large numbers of images.

## Enhanced Processing for Stunning Output Quality

Starting in fall 2024, Zoner Photo Studio X has a new version of photo processing in the Develop module. This update includes redesigned handling of blown-out highlights and exposure settings (light, shadows, contrast, etc.). A new setting, Color Reconstruction, has been added to control how colors behave around blown-out highlights.

These changes benefit all processed photos, including HDR, whose support was introduced in the spring. As a result, Zoner Photo Studio X is among the best programs for RAW processing worldwide.

## Universal Chromatic Aberration Removal

Chromatic aberration caused by lens defects can now be corrected even if a profile for the lens does not exist or is unavailable. Zoner Photo Studio X analyzes the image and chooses the correct settings to suppress aberration, eliminating color errors on contrasting edges.

## Over 1,000 Customizable Shortcuts and Loupedeck Support

The fall update introduces entirely new control options, such as combining keyboard shortcuts for various settings with scrolling the mouse wheel to change values. Everything is completely customizable. Advanced photographers will appreciate support for editing consoles like Loupedeck+.

## Intuitive Video Clip Control and Precise Photo Book Creation

In the Video module, clips, images, and text can now be transformed using anchor points directly in the video preview. Users will also appreciate new rulers and grids for precise photo placement when designing photo books in the Print module.

## Faster Fujifilm X-Trans Processing and Reliable File Selection

Fujifilm's X-Trans-equipped camera owners will experience groundbreaking speed improvements, with RAWs loading up to 2.4 times faster than last year. Checkbox selection, like the one used by Windows Explorer, will be useful for those who have accidentally lost their carefully created photo selections using Ctrl and Shift keys.

The fall update of Zoner Photo Studio X is available today for all ZPS X users. A 7-day trial version can be downloaded directly at [www.zoner.com](http://www.zoner.com).
